

Basic Django Commands

Dear Students,

Please take the time to read and understand the following basic Django commands. These commands are fundamental to working with Django and will be essential as we move forward in our course:

1. ****Create a New Django Project:****
 - Use the command: ``django-admin startproject projectname``
2. ****Create a New App:****
 - Use the command: ``python manage.py startapp appname``
3. ****Run the Development Server:****
 - Use the command: ``python manage.py runserver``
4. ****Make Migrations:****
 - Use the command: ``python manage.py makemigrations``
5. ****Apply Migrations:****
 - Use the command: ``python manage.py migrate``
6. ****Create a Superuser (Admin User):****
 - Use the command: ``python manage.py createsuperuser``
7. ****Open Django Shell:****
 - Use the command: ``python manage.py shell``
8. ****Check for Errors:****
 - Use the command: ``python manage.py check``
9. ****Create Database Tables for an App:****
 - Use the command: ``python manage.py makemigrations appname``
10. ****Collect Static Files:****
 - Use the command: ``python manage.py collectstatic``

This is your homework. Please remember all the commands. I will ask on Monday.

Best regards,
Akanksha
